

AMENDMENT TO THE SPECIFICATION

At page 4, please amend the first full paragraph to read as follows:

The output terminal of the IC timer 21 is connected to the cathode of a diode 35, the anode of which is connected to the gate or control input terminal of the MOSFET PWM switch 16, which gate terminal is also connected through a bias resistor 36 to the B+ supply line 12. A diode 37 is connected in parallel with the lamp 11, having its cathode connected to the B+ supply line 12, and a capacitor 38 is connected between the B+ supply line 12 and ground.
